

RECEIVE AND SEND FAX SERVICES FOR MOBILE DEVICE

ABSTRACT OF DISCLOSURE

A mobile device for receiving and rendering an incoming fax message and for sending an outgoing fax message is provided as well as associated fax receiving and sending methods. The receiving method includes: a) receiving the incoming fax message from a calling party via a wireless network, b) activating a user cue, c) displaying information about the incoming fax message on a graphical user interface, and d) communicating the incoming fax message to an external rendering device via an output port. The sending method includes: a) storing one or more data files in a first storage device associated with the mobile device, b) generating an outgoing fax message including at least one data file from the one or more data files in the first storage device and initiating an outgoing call via the wireless network to a recipient, and c) sending the outgoing fax message to the recipient.
